

INFO4 Projet :

18, CampusIot

Soutenance de projet

BLANQUET Antoine

LAMBERT Paul

YUNG Kevin

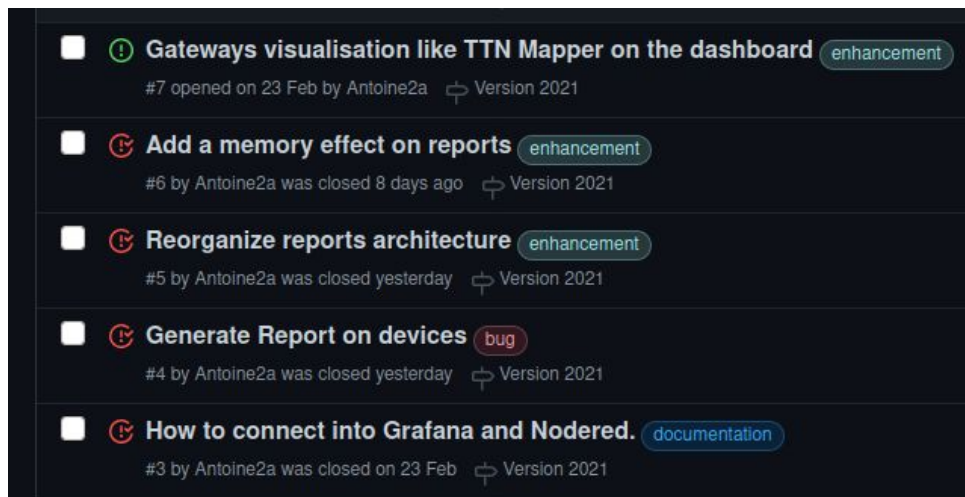

Le projet INFO4 2020-2021 a pour objectif le développement d'outils de supervision de la plateforme CampusIoT.

Ces outils permettent le **suivi de gateways** (dashboard) et la **production de rapports** (reports) réguliers donnant des métriques sur ces objets.

Cela permettra entre autres d'informer de l'activité des objets et donc de cerner des possibles défaillances.

Organisation

- Brainstorming en équipe afin de bien cerner les subtilités du projet ainsi que des besoins de celui-ci
- Séparation de tâches pour être indépendant et plus efficace. Utilisation des Issues.

- Réunions régulières en équipe afin de pouvoir faire un point et rassembler nos idées

Architecture Global + Technologies

Reports

curl & jq scripts
generate an **HTML report** of the gateways

Mouse speed 

Inline  line graphs 

Bar charts , negative values: , stacked: 

Composite inline 

Inline with normal range 

Composite bar 

Discrete 

Discrete with threshold 

Customize size and colours 

Tristate charts 
(think games won, lost or drawn)

Tristate chart using a colour map: 

Box Plot: 

Pre-computed box plot: 

Sparkline

Dashboard

Process for displaying informations of the gateways and endpoints into a dashboard view

 ChirpStack

 influxdb

 Grafana

Dossiers - reports

Unchanged

generate_reports.sh

get_jwt.sh

get_organizations.sh

get_applications.sh

clean.sh

get_gateway.sh

get_gateway_stats.sh

get_gateways.sh

generate_gateways_report.sh

Create html for gateways

get_id_gateways_change.sh

change_date_momentjs.js

generate_sparkline_image.js

get_id_devices_change.sh

generate_devices_report.sh

update_url_orgalD.sh

get_devices.sh

Create html for devices

Dossiers - data

Intermediate files are created throughout the whole processus, stored in this directory and served to create the final html files (for gateways and devices)

mail_to_gateways_owners.sh

sendmail_reports.sh

- Continuation d'un projet déjà commencé
 - Compréhension du code présent
 - Nombreuses technologies à appréhender, installer, et savoir utiliser
 - Être rigoureux et apprendre pas à pas
- Compatibilité des différentes technologies
- Retranscrire nos idées en code avec les langages donnés
- Une implémentation toujours améliorable

Conclusion

- **Metrics** <https://gricad-gitlab.univ-grenoble-alpes.fr/Projets-INFO4/20-21/18/>

58 commits de code 40 files changed, 878 insertions(+), 185 deletions(-). 25 de documentations.

Principalement des lignes réalisés en langage Script Shell.

- **Features implémentés**
 - Sparkline dans le rapport
 - MomentJS Formating Time
 - Adaptation Devices
 - Effet Memoire (active / passive)
 - Email avec Sparkline en PJ
- **Features abandonnées**
 - Duty Cycle sur Grafana
 - TTN Mapper
- **Améliorations possibles**
 - Emails with Sparkline.
